The **TCI200 OBD-II Adapter** is designed for use with the TCI100 NiteStar Distance Measurement Instrument. The TCI200 allows the DMI to be used in virtually any vehicle with an OBDII port, without the need to hook up any additional wiring to the vehicle.

Installation is as simple as plugging one end of the TCI200 into your OBDII port and the other into your DMI. No additional power cables are needed since the TCI200 supplies power from the OBDII port.

The TCI200 automatically detects if the ignition is on or off, so that the DMI can be left connected at all times without draining the vehicle’s battery.

The TCI200 utilizes specially developed software to identify the most accurate OBDII signals to use for measuring distance. In most vehicles, the TCI200 can measure distances to within 1 foot in a thousand, but can be calibrated for higher accuracy by performing a simple calibration procedure.
